SUMMARY

Frontend Developer with 2+ years of experience building scalable, production-grade web applications. Specialized in complex form-driven workflows, role-based access systems, multi-step processes, and data-heavy dashboards. Experienced across fintech, healthcare, and geospatial domains with a strong focus on clean UI architecture and long-term maintainability.

SKILLS & TECHNOLOGIES

Languages	JavaScript, HTML5, CSS3
Styling	Tailwind CSS, Bootstrap, Material UI, Ant Design
Frontend	React.js, Next.js
Backend	Node.js, Express.js
State / Animation	Zustand, Framer Motion
APIs & Docs	REST APIs, Swagger
Geospatial	QGIS, ArcMap, GeoServer, Leaflet.js, QField
Design & Tools	Figma, Git, GitHub, VS Code
Other	Data Visualization, Responsive Design, Role-Based UI, Workflow-Driven UI

EXPERIENCE

Frontend Developer

Nov 2025 – Present

Empower Fintech Private Limited (MedsCred) | Ahmedabad

Working on multiple live portals on a healthcare fintech platform — each an independent workflow-driven module. Product specifics are confidential per NDA; representative technical contributions are described below.

- Built and shipped multiple production portals end-to-end, each serving a distinct user role with its own workflow, access rules, and UI logic
- Architected multi-step form flows with complex conditional logic, field-level validations, and dynamic section rendering based on user role and input state
- Implemented granular role-based access control (RBAC) — controlling route access, component visibility, and action permissions across multiple user roles
- Developed a reusable UI component library shared across portals, reducing duplication and ensuring a consistent design language across the product suite
- Integrated REST APIs with proper error handling, loading states, and optimistic UI patterns; collaborated closely with the backend team on API contract design
- Led UI/UX iteration cycles — translating Figma designs into pixel-accurate, responsive interfaces and driving usability improvements across all modules

Frontend Web Developer

Mar 2025 – Oct 2025

AccionLAND Private Limited | Ahmedabad

- Led frontend development of large-scale internal portals (EazeURBAN, CWIN) with multi-role dashboards serving urban planning and water network operations
- Built a complete city-level safety dashboard (EazeURBAN) integrating QGIS 3D city models, a rainfall prediction model, and visualizations for urban safety facilities
- Contributed to India's first water network integrated dashboard (CWIN) in collaboration with NIUA — integrated GeoServer map layers with accurate geospatial symbology

- Built complex form workflows with multi-step validations, conditional logic, and role-based access controls for admin-level data management and onboarding modules
- Collaborated with product and backend teams to align UI with business requirements; contributed to backend integration using Node.js and Express.js

Frontend Developer Intern

Sep 2023 – Feb 2025

AccionLAND Private Limited | Ahmedabad

- Built geospatial dashboards from scratch — FloodLab (real-time flood zone monitoring), Water Reservoir Watch (live + historical reservoir data with forecasting), and DroneQuote (drone survey cost estimator)
- Integrated GeoServer and Leaflet.js for real-time geospatial data layer rendering with time-based controls and interactive filtering
- Worked with domain experts and environmental teams to design dashboards for flood monitoring and environmental data visualization
- Built Water Reservoir Watch with regression-model-based forecasting, dynamic filtering, custom tooltips, and responsive grid layouts
- Developed DroneQuote — a client-facing cost estimation tool with validation logic tied to company pricing models, reducing manual turnaround time

PROJECTS

NJ Gaming Zone Dashboard

Next.js, Tailwind CSS, Zustand, Framer Motion

- Designed and developed a modern gaming dashboard with interactive previews and animations
- Applied Zustand for scalable state management and Framer Motion for advanced animations
- Optimized rendering with lazy loading and component-level performance improvements

Chess Dashboard

React.js, Tailwind CSS, Express.js

- Built a local multiplayer chess dashboard with real-time play via PIN-based Wi-Fi connection
- Implemented socket-based updates for live opponent move syncing
- Added move history, player timers, and win/loss analytics

EDUCATION

B.Tech – Computer Engineering

2021 – 2025

Aditya Silver Oak Institute of Technology, Ahmedabad · CGPA: 8.63

12th – GHSEB

2019

Fellowship Higher Secondary School, Ahmedabad · 74%
